

Creative model held constant: aion

320 target

direct script read

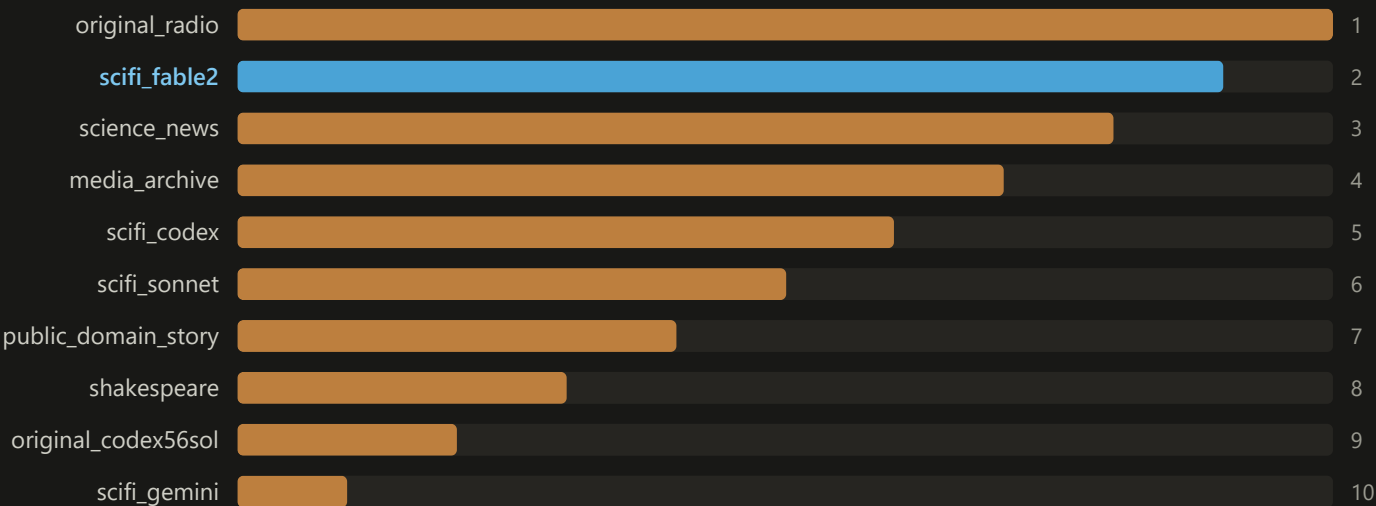

scifi_sonnet's 320 leg FAILED — shown DNF, excluded from its mean.

420 target

direct read · rung confounded

3 banks re-legged on looser schema caps mid-sweep — not a clean bank-vs-bank tier.

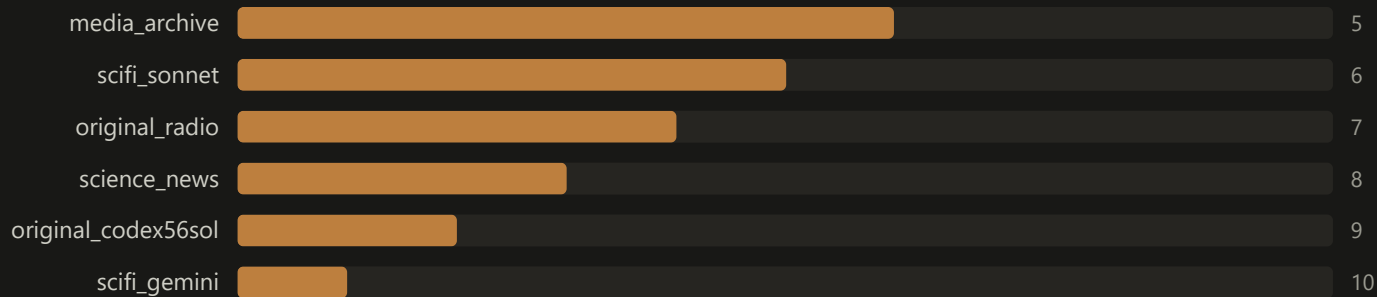

720 target

blind quality read

the judged rung — scripts anonymized before reading.

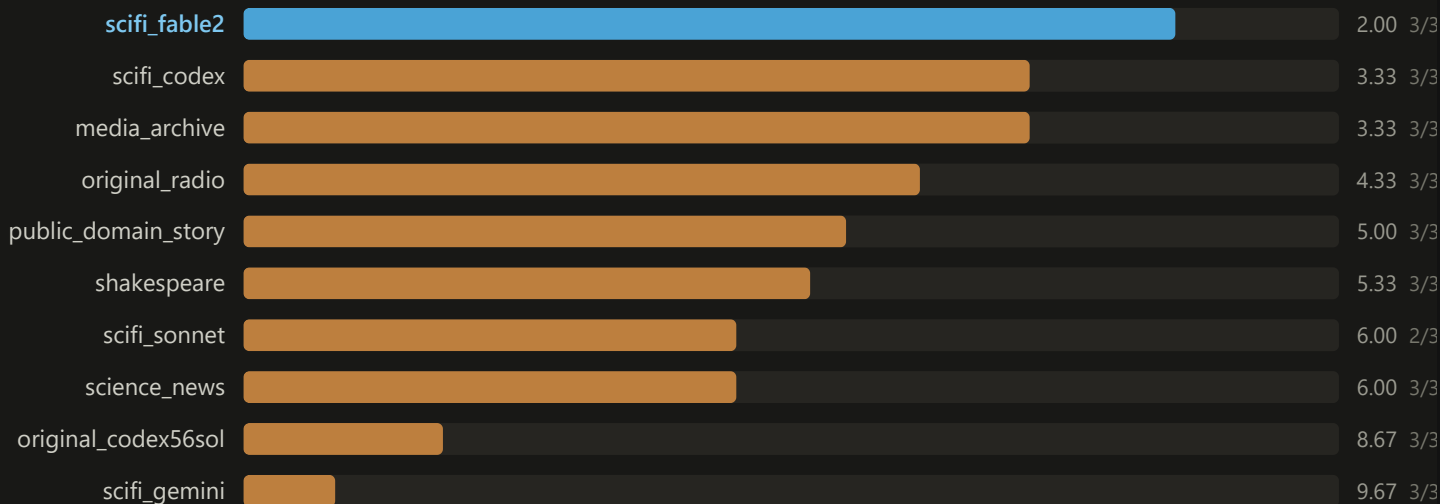

Combined leader

mean rank of available reads

ties break toward the better 720 rank.

These are source banks / story lanes, **not** different creative models — every run used the same aion creative pair, so the gaps are bank effects. 320 & 420 are direct script reads; 720 is the blind read. 420 carries a mid-sweep schema-cap confound. A failed 320 leg is shown DNF and dropped from that lane's mean rather than scored. **My read diverges from the earlier pass in two honest ways:** at 320/420 scifi_fable2 is a solo *monologue*, so I rank real two-handers (original_radio, media_archive) above it there — it only becomes the drama that wins at 720 once it has room; and I dock media_archive / others where a name-substitution text corruption surfaced. Net: **scifi_fable2** still wins overall (2.00), but the 3-tier view lifts **scifi_codex**, **media_archive**, **original_radio** for consistency and confirms **original_codex56sol** + **scifi_gemini** at the floor.
